Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Rick Matos on 5-25-05.

Amend claim 1 as follows:

- 1) (Currently amended) [An improved] A multi-layered osmotic device for the controlled delivery of one or more active agents to one or more environments of use wherein the osmotic device comprises:
- a) a compressed core comprising a first active agent and an osmotic agent for controlled and continuous release of the [drug] first active agent;
 - b) a semipermeable membrane surrounding the core and having a preformed passageway therein, said semipermeable membrane being permeable to a fluid in the environment of use and substantially impermeable to the first active agent;
 - c) an inert, completely erodible or water soluble polymer coat comprising poly(vinylpyrrolidone)-(vinyl acetate) copolymer partially or substantially completely surrounding the semipermeable membrane and plugging the passageway in the [wall] semipermeable membrane; and
 - d) an external coat comprising a second active agent for immediate release of the [drug] second active agent, wherein the first active agent is released from the core

Art Unit: 1615

after the polymer coat has partially or completely dissolved or eroded, and the first and second active agents are released into the same or different environments of use to provide a controlled delivery of the one or more active agents.

Allowable Subject Matter

Claims 1-36 and 38-55 are allowed.

The following is an examiner's statement of reasons for allowance:

Instant claims are directed to a multi-layered osmotic device for controlled delivery of active agents comprising a compressed core containing an active agent and an osmotic agent, a semipermeable membrane surrounding the core and containing a preformed passageway, an inert and completely erodible coat that covers the semipermeable membrane as well as the passage way and a external coat that is applied to and covering the inert polymer coat. Prior art of record fails to teach an osmotic device, where the passageway is completely covered with an inert layer and an external layer that is immediately in contact with the erodible coat and instead teaches a device with a passage way that opens up to the outside environment and contains non-erodible microporous lamina between the semipermeable membrane and the external drug-containing coat. The instant delivery system containing an erodible coating that covers the passage way and that is immediately in contact with the external coat is not obvious over the prior art teachings.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
